

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of subscription to a service in respect of a processing of an input program comprising at least one particular event, ~~which said method comprises comprising the following steps of,~~ implemented by a service provider:

~~... a step of offering~~ various subscriptions to a user who is to make a choice of subscription and who is furnished with a device comprising means of selection of the particular event which can be configured on the basis of the chosen subscription and are suitable for providing an output program comprising or not comprising the particular event according to the chosen subscription; ~~and~~

~~... a step of validating~~ the user's choice of subscription which triggers a step of configuring said means of selection.

2. (Original) The method of subscription to a service as claimed in claim 1, wherein the input program contains a table of events, the means of selection being suitable for selecting a particular event on the basis of an event status value in the table.

3. (Currently Amended) The method of subscription to a service as claimed in claim 1, wherein said device comprises means ~~of accelerated reading of a recorded program; and means of deactivation which are suitable for deactivating said accelerated~~

~~reading means of accelerated reading of a recorded program during~~
the particular event in respect of a specified subscription.

4. (Original) The method of subscription to a service as claimed in claim 1, wherein the particular event contains at least one advertisement.

5. (Original) The method of subscription to a service as claimed in claim 1, wherein the choice of the subscription is made by selecting one subscription from among several subscriptions offered on a graphics interface linked to said device.

6. (Original) The method of subscription to a service as claimed in claim 1, wherein said validating step is implemented by the service provider by sending said device a signal characteristic of the chosen subscription, said signal being suitable for configuring said means of selection as a function of the chosen subscription.

7. (Original) A device for reading an input program comprising at least one particular event, which device comprises means of selection of the particular event which can be configured on the basis of a subscription chosen by a user and which are suitable for providing an output program comprising or not comprising the particular event according to the subscription chosen by the user.

8. (Original) A device for recording an input program comprising at least one particular event, which device comprises means of selection of the particular event which can be configured on the basis of a subscription chosen by a user and which are suitable for storing on a medium an output program comprising or not comprising the particular event according to the subscription chosen by the user.
